Land Use/NAICS Association

It has been used the open access Land Use of the County of San Diego provided by SanGIS together with the San Diego Association of Governments (SANDAG), a public agency serving the role of regional decision-making, coordinating 18 cities and county governments (SANDAG, 2015).

The regional Land Use data source is up to date as of the year 2013 and reflects the land resources and types of land use in the national economy. Its pattern is based on the Regional Growth Forecast of the SANDAG Public Agency, guided by the principles of Smart Growth, that push to have more efficient and environmentally-sensitive pockets of development, able to spur compact communities, reducing the existing suburban sprawl phenomenon (SANDAG, 2015).

The table lists a sample of land uses associated with their main Macro categories.

USE CODE	LAND USE DESCRIPTION	MAJOR CATEGORIES
1000	Spaced Rural Residential	AGRICULTURE AND RURAL RESIDENTIAL
1100	Single Family Residential	RESIDENTIAL

Mapping the Local Cluster on GIS

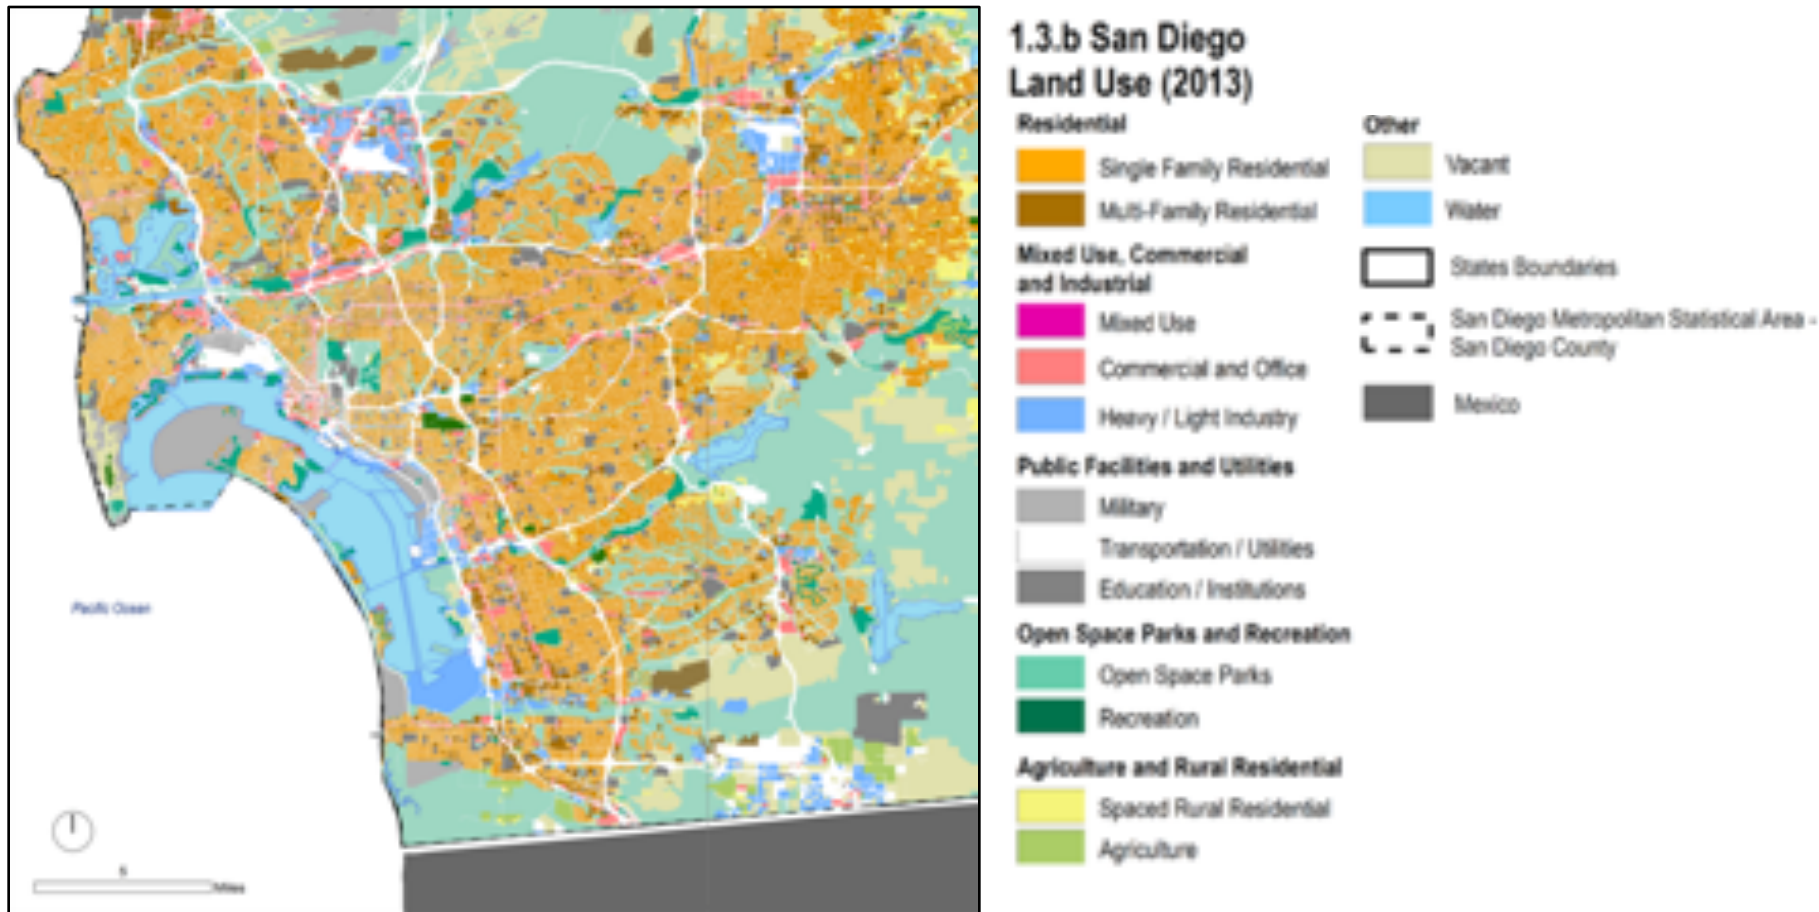

The investigation has focused on the **San Diego County area** which corresponds to the San Diego MSA.

The **main territorial unit** for the data gathering process, is the 5-digit zip code. In detail, data have been collected, analyzed and processed for the **185 zip codes** composing the San Diego MSA, namely **from the zip code 91901 to 92199**

Community Planning Areas Analysis

A community plan is a public document, included within the City's General Plan, "which contains specific proposals for future land uses and public improvements in a given community... It provides tailored policies and a long-range physical development guide for elected officials and citizens engaged in community development" (The City of San Diego, 2017).

The main elements included are:

- Land Use;
- Transportation;
- Urban Design;
- Public Facilities and Services;
- Natural and Cultural Resources;
- Economic Development (The City of San Diego, 2017).

For each cluster, it will be defined:

- Neighborhoods;
- Community plan;
- Zoning;
- Connection with the main urban fabric characteristics.

Local Real Estate Cluster and Community Planning Areas Analysis

The spatial agglomeration of the cluster emerges in three main areas: **Mira Mesa, Torrey Pines and University.**

The first one is located in the northern coastal region of the City of San Diego close to the MCAS *Miramar*, which constitutes one of the main region's employment hubs.

The *Torrey Pines* area, instead, includes all the research spin-offs of the UCSD campus, while the *University* area has undergone an important change in the last years going from "a student-oriented college town" to an important urban node.

The three community plans together try to encourage the location of scientific research, biotechnology, and light manufacturing uses.

Local Real Estate Cluster and Community Planning Areas Analysis

Two main Land Use categories : **Light Industry** and **Office Low rise**, which allow “office, research and development, and light manufacturing uses”.

Major concentration is recognizable **along the I- 805 and the I-5**, two major North-South Interstate Highways in Southern California. The Railway Line and the Mira Mesa Boulevard trace further the path of the specific Local Cluster.

Its morphology in this area reflects the old typology of the industrial park.

Local Household Goods and Services Cluster and Community Planning Areas Analysis

This cluster falls within two community planning areas: **Clairemont Mesa** and **Otay Mesa**.

The latter, located at the southern limit of the city of San Diego, bordering with Mexico, reveals a greater concentration of establishments, regarding the specific Local Cluster.

The density of this cluster in the specific area suggests an additional question: is there a competitive advantage in locating next to the border with Mexico?

Local Household Goods and Services Cluster and Community Planning Areas Analysis

According to the planned Land Use of the Community Planning of the Otay Mesa area, which designates a quarter of the land area for industrial uses, the Local households goods and services Cluster matches with the two main Land Use categories of **Light Industrial** and **Commercial and Office**.

Following the main strategies of the area that forecast the connection between the main employment centers with the transit system using a compact, pedestrian-friendly orientation, the concentration of the pattern of the Local Cluster can be observed within the **Central Village** area.

Local Hospitality Establishments Cluster and Community Planning Areas Analysis

This Local cluster emerged with a much less concentrated pattern, if compared with the other ones.

The sector is spread all over the city, since it represents one of the pillars of its Local Economy. It is agglomerated around the main points of interest, e.g. historical spots, scenic routes, historic parks, and all the other natural assets that make the city attractive to tourists.

It fits within the Community Plans of:
Downtown area, Balboa Park, Uptown,
Greater North Park, Mission Bay Park, Kearny
Mesa, LA Jolla, Mira Mesa, Carmel Valley,
Torrey Pines and University.

Local Hospitality Establishments Cluster and Community Planning Areas Analysis

The cluster matches with the main Land Use categories of ***Golf Course, Open Space Parks, Commercial and Offices.***

It is traceable a clear path of the cluster along the Mission Valley Freeway and Friars Road, the central 4th and 5th Ave., University Ave. and El Cajon Blvd. within the Greater North Park area, Garnet Ave. within the neighborhood of Pacific Beach.

The Railway Line and the Mira Mesa Blvd. tracks some further paths of the Cluster.

Local Industrial Products Cluster and Community Planning Areas Analysis

The cluster falls within three main hubs around the areas of Otay Mesa, Mira Mesa and Kearny Mesa. The Cluster develops along the Otay Mesa Road within the Central Village area of Otay Mesa and the Pacific Highway within the Midway/Pacific Highway Community Plan.

Local Industrial Products Cluster and Community Planning Areas Analysis

This Cluster is located in the north central portion of the City and falls within the four Community planning areas: Linda Vista, Clairemont Mesa, Kearny Mesa and Midway Pacific Highway Corridor.

The Kearny Mesa area present the greatest spatial agglomeration of establishments of the Local Industrial Products and Services Cluster. On the basis of their planned Land Uses, the specific Cluster fits into the two main Land Use categories of Light Industry and Commercial and Office.

Source: Authors' elaboration

Local Commercial Services Cluster and Community Planning Areas Analysis

By overlapping the Community Planning related to the municipal boundaries of San Diego with the morphology of the Local Commercial Services Cluster, it emerged a physical spatial concentration within three main hubs around the areas of Downtown, Midway, Kearny Mesa and Mira Mesa.

The Local Cluster matches with the main Land Use categories of Light Industrial, Commercial and Office, Mixed Use.

San Diego State University, CA, USA

Local Personal Services Cluster and Community Planning Areas Analysis

The Local Personal Services (Non-medical) Cluster is concentrated around the areas of Downtown, Uptown, Kearny Mesa, Greater North Park, Pacific Beach and Mission Valley.

Local Cluster:
Personal Services
(Non-Medical)

Local Personal Services Cluster and Community Planning Areas Analysis

The morphology of the specific cluster traces specific paths along the Mission Valley Freeway, Cabrillo Freeway within Kearny Mesa, the Pacific Highway, the 4th and 5th avenue between Uptown and Downtown, and University Ave./El Cajon Blvd./Adams Ave/Park Blvd. within the area of North park. On the basis of the specific planned Land Uses, the Personal Services Cluster fits within the main Land Use categories of Commercial and Office, and Education/Institutions.

MAPS-LED
Multidisciplinary Approach to Plan Smart Specialisation Strategies
for Local Economic Development

1. Objective of the Analysis

AIM

Investigate and assess how the expectations of future development provided by the application of *Smart Specialization Strategies* (S3) could contribute to tackle:

- **A. Weaknesses** inherently associated to Local Clusters (Endogenous Factors);
- **B. Threats** entailed by the decisional-making process (Exogenous forces);

Marie Skłodowska-Curie RISE
MAPS-LED
Multidisciplinary Approach to Plan Smart Specialisation Strategies
for Local Economic Development

2. Introduction to the Dynamic S.W.O.T Analysis Technique (Strengths, Weaknesses, Opportunities and Threats)

D-S.W.O.T Analysis: Key Principles

DEFINITION

- A Technique adopted to critically investigate and assess a *complex system* by analyzing the nature and intensity of the relationship among *ex-ante* identified *Endogenous* (Strengths and Weaknesses) and *Exogenous* (Opportunities and Threats) factors;

METHOD

- 1. Combination of the *n factors* in a square Matrix $n \times n$;
- 3. Pairwise comparison among identified *n factors*
 - (row \times column, i.e. $J_{12} \times J_{21}$);
- 4. Scores assigned (threshold $-2 < 0 < +2$) quantify the extent and nature of the relations among the factors;

USE

- As a 'Control tool' which allows to evaluate the validity of a given strategy and the consequent redefinition;

Source: (Bezzi, C., 2005).

D-S.W.O.T Analysis: Key Principles

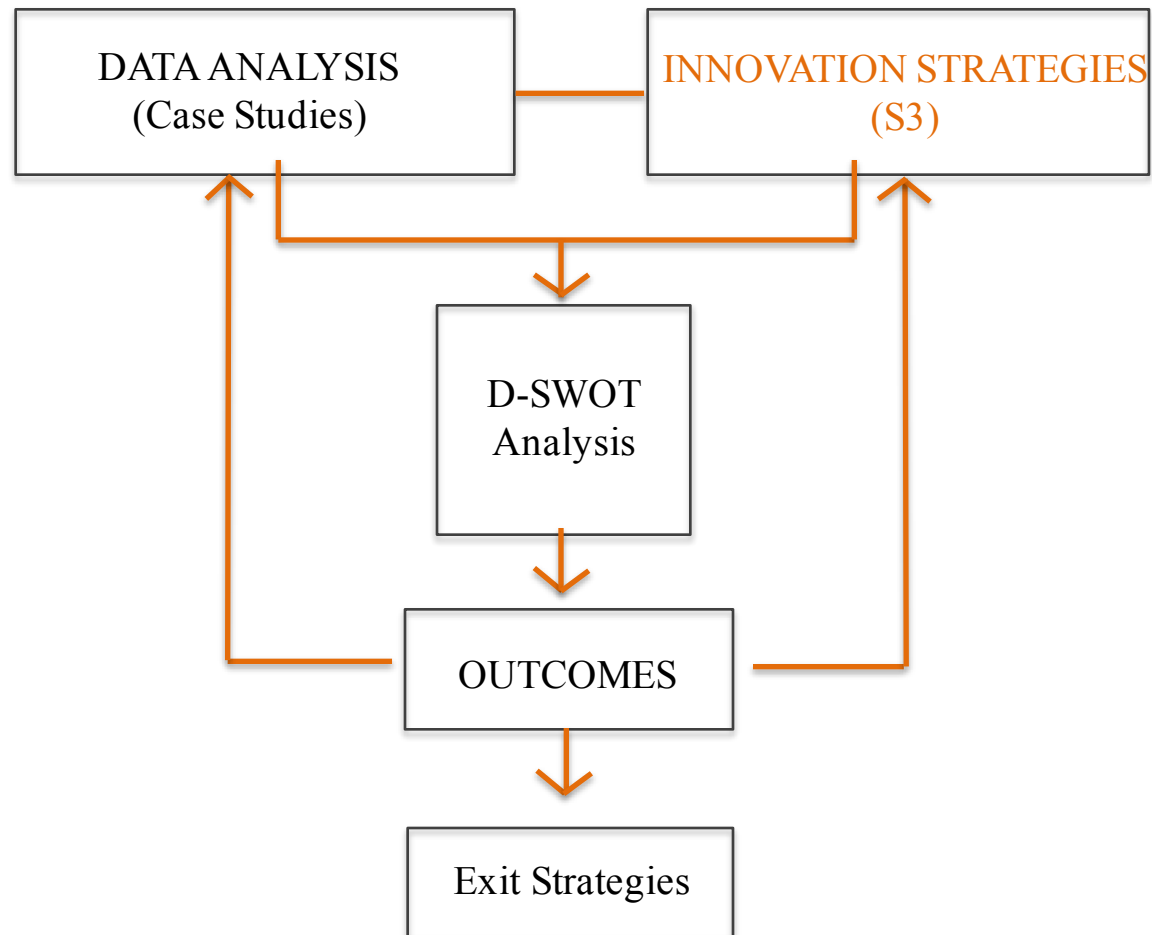

- Non-unidirectional relationship: When we assess how every row element $S_2 \times S_1$ is influenced by the corresponding column element and vice-versa ($S_1 \times S_2$), a *dependency relation* is assigned;

The extension of this concept to the D-SWOT is:

$$(S_2;S_1) \neq (S_1;S_2) \Rightarrow \text{row score} \neq \text{column score}$$

Figure 1.0 – Dynamic S.W.O. T: 'Comparative Matrix' of Endogenous and Exogenous Factors.

Endogenous Sub-Matrix

It is defined by the relationship among the endogenous elements of cluster (**Strengths** and **Weaknesses**).

It shows what synergies or limitations act into the cluster, without the effects of exogenous contributions (Opportunities and Threats).

Endogenous Matrix 1b Loc. Real Estate						
		S		W		
		Job creation	Innovation	Poverty Rate	Low Location Quotient	
S	Job creation	-----	1	-1	-1	-1
	Innovation	2	-----	-1	-1	0
W	Poverty Rate	-1	0	-----	1	0
	Low Location Quotient	-1	-2	2	-----	-1
		0	-1	0	-1	

Exogenous Sub-Matrix

It shows the relationship among the external environment without the influence of the structural factors of cluster (Strengths and Weaknesses).

Exogenous Matrix 1a Loc. Real Estate		O		T		
		Modernization	Inter-sectorial activities	Lock-In Dynamics	Risk-Adverse behavior	Tot
S	Modernization	-----	2	-2	-2	-2
	Inter-sectorial activities	2	-----	-1	-1	0
W	Lock-In Dynamics	-2	-2	-----	2	-2
	Risk-Adverse behavior	-2	-2	2	-----	-2
		-2	-2	-1	-1	

Characteristic Sub-Matrix

- Provide the relationship among the endogenous and exogenous elements of cluster.
- Describe the effects of exogenous elements on strengths and weakness without the benefits of internal synergic effects.

Characteristic Matrix 1a Loc. Real Estate						
		O		T

W	Poverty	-1	-1	1	2	1
	Low LQ	-1	-1	2	0	0
		1	-2	0	-1	

Characteristic Matrix 1b Loc. Real Estate						
		S		W		
		Job creation	Innovation	Poverty	Low LQ	
O	Modernization	2	2	-1	-2	1
	Inter-sectorial Activities	2	1	-1	-1	1
T	Lock-In Dynamics	-1	-2	1	2	0
	Risk-Adverse behavior	-1	-2	1	1	-1
		2	-1	0	0	

Local Industrial Products and Services Cluster

ENDOGENOUS FACTORS	
S	W
Job creation	Low Innovation
Location Quotient	Moderate Poverty Rate

- 2 = line item is heavily hindered, or even canceled, by column;

- 1 = Line item is blocked by column, but it still fails develop their own effects, even in a reduced form;

0 = the two elements are independent or the same;

+ 1 = The line item sees to increase its effects due to synergy made by the column element;

+ 2 = Line item achieves a remarkable increase due to the element of columns;

EXOGENOUS FACTORS	
O	T
Modernization	Lock-In Dynamics
Intersectorial	Risk-Adverse

Industrial Product

		S		W		O		T		Tot
		Job creation	Location Quotient	Low Innovation	Moderate Poverty rate	Modernization	Intersectorial activities	Lock-In Dynamics	Risk-Adverse behavior

Figure 1.0 – Dynamic S.W.O. T: ‘Comparative Matrix’ of Endogenous and Exogenous Factors.

Endogenous and Exogenous Sub-Matrix

Endogenous Matrix 2c Industrial Product						
		S		W		
		job creation	Location Quotient	Low Innovation	Moderate poverty rate	
S	job creation	-----	2	0	-2	0
	Location Quotient	1	-----	0	-1	0
W	Low Innovation	0	-1	-----	1	0
	Moderate poverty rate	0	0	0	-----	0
		1	1	0	-2	

Exogenous Matrix 2d Industrial Product						
		O		T		
		Modernization	Intersectional activities	Lock-In Dynamics	Risk adverse behavior	
O	Modernization	-----	2	-1	-2	-1
	Intersectional activities	2	-----	0	-1	1
T	Lock-In Dynamics	-2	-1	-----	2	-1
	Risk adverse behavior	-1	-1	2	-----	0
		-1	0	1	-1	

Characteristic Sub-Matrix

Characteristic Matrix 2a Local ind. Product						
		O		T		
		Modernization	Inter-sectorial activities	Lock-In Dynamics	Risk-Adverse behavior	
S	Job creation	2	1	-1	-1	1
	Location Quotient	2	1	-2	-1	0
W	Low Innovation	-1	-1	2	1	1
	Moderate poverty rate	-1	0	1	0	0
		2	1	0	-1	

Characteristic Matrix 2b Local ind. Product						
		S		W		
		Job creation	Location Quotient	Low Innovation	Moderate Poverty rate	
O	Modernization	2	2	-2	-1	1
	Intersectorial activities	2	2	-1	-1	2
T	Lock-In Dynamics	-1	-2	2	1	0
	Risk-Adverse behavior	-1	-2	1	1	-1
		2	0	0	0	

Marie Skłodowska- Curie RISE
MAPS-LED
Multidisciplinary Approach to Plan Smart Specialisation Strategies
for Local Economic Development

5. Limitations and Conclusions

Marie Skłodowska- Curie RISE
MAPS-LED
Multidisciplinary Approach to Plan Smart Specialisation Strategies
for Local Economic Development

Limitations

- **Moderate Degree-of-freedom in score assignment:** An ex-ante Analysis Hierarchic Process (AHP) is highly recommended in order to define the rank of the variables, thus avoiding the risk of a subjectivity Bias;

Conclusions

- D-SWOT is a useful tool to analyze and compare - simultaneously - the relationships with forecasted strategies and the actual composition of local economies;

Marie Skłodowska- Curie RISE
